What are Feature Restrictions?

Feature Restriction

- These are the features which are hidden from the users to restrict it's use
- All the menu entries, buttons and shortcuts will be removed which are related to restricted features
- User may think restricted features do not exist

What is Feature Locking?

Feature Locking

- These are the features which are locked from the users to but user can unlock them to use
- Locked features will have UI elements to show that they are locked
- All the menu entries, buttons and shortcuts will show pop up about how to unlock when used
- This is useful when integrator wants to give trail or free version of software

Configuration

Integration

- To mark any user as restricted user or locked user WOPI client should return *CheckFileInfo* containing a field *IsUserLocked* or/and *IsUserRestricted* with a boolean value

Configuration

- Configuration related to Feature restriction and Feature locking can be found in coolwsd.xml

Thanks !
