New features in the Collabora Office iOS app

Tor Lillqvist

Software Engineer  Collabora Online

@TorLillqvist

Summary of new features in the Collabora iOS app during the last year

- Features from desktop Collabora Office enabled in the app
- Features from web-based Collabora Online enabled in the app
- Features specific to Collabora Office on iOS
- Features that especially users on mobile devices want but affect web-based Collabora Online, too

Features from desktop Collabora Office enabled in the app

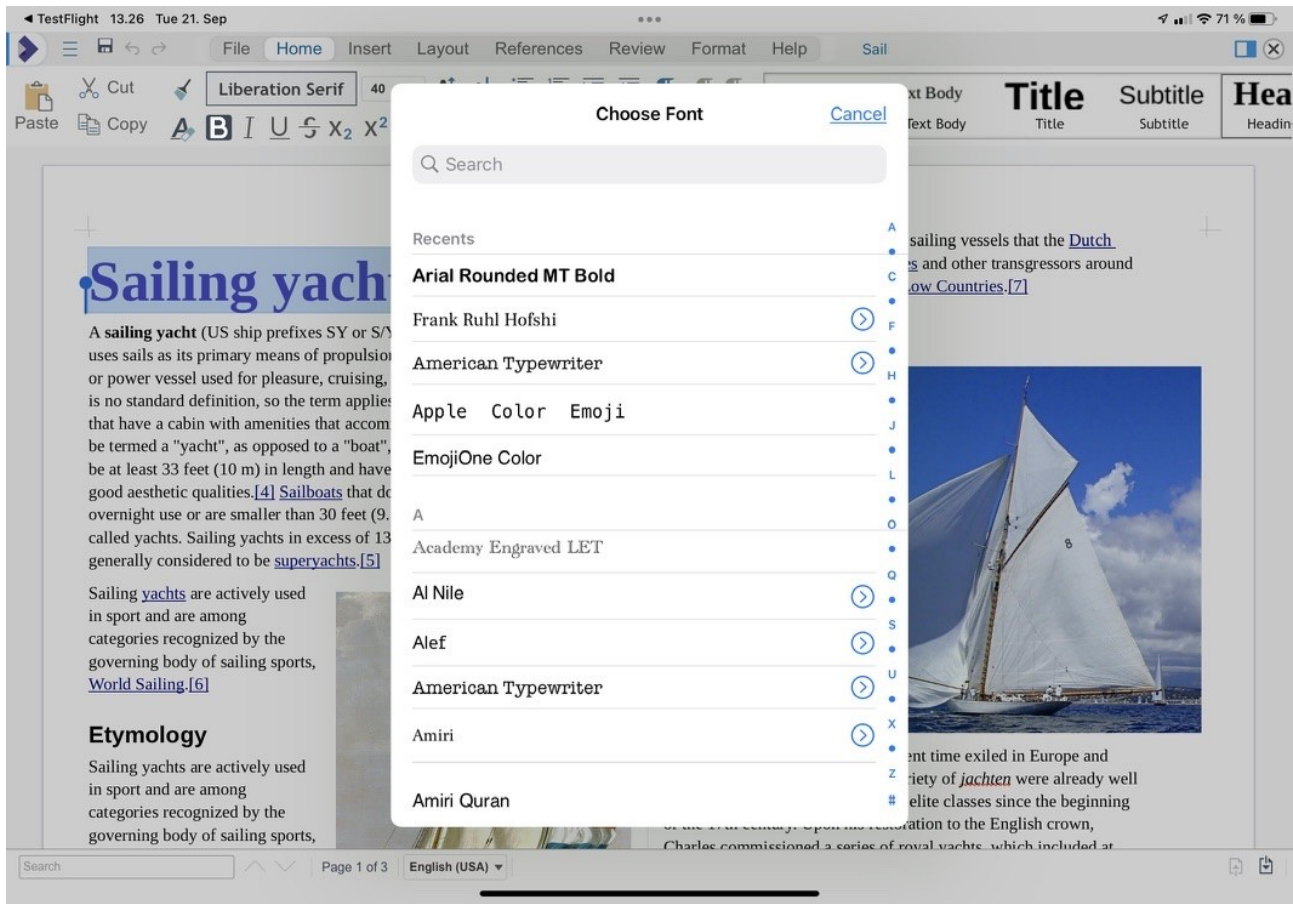

- Enable the thesaurus functionality
- Bundle thesauruses for a few languages
- For spell checking, use the system spell checker for most languages
 - But not for Swiss German, as the iOS dictionary is for German in Germany

Features from web-based Collabora Online enabled in the app

- Enable opening and (simple) editing of PDF files

Features specific to Collabora Office on iOS

- Truly native font selector
 - With that I mean that it is not implemented in Javascript
 - Looks really nice
 - Same idea could be used for colour selector too, for instance

Features that especially users on mobile devices want but affect web-based Collabora Online, too

- Improve emoji support
 - There were lots of problems in the handling of characters outside the Basic Multilingual Plane, i.e. characters that require two UTF-16 code units
 - Also emojis that consist of several combining characters (like “male artist with brown skin colour” which consists of three characters) were mishandled

- These improvements impact also web-based Online but complaints about related bugs were mainly from mobile app users
